

Publicity Speedmatic Saw, Type K-75

Release date May 1, 1940

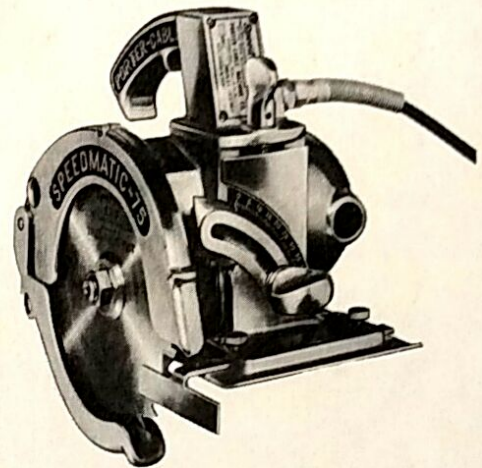

NEW LIGHT WEIGHT HIGH SPEED ELECTRIC HAND SAW

The Porter-Cable Machine Company,
Syracuse, N.Y., announces another addition
to their line of Speedmatic Saws. This
new machine carries a 7-1/2 inch diameter
blade, with cutting capacity of 2-1/2 inch
material, yet weighs only 14-1/2 pounds.

The blade travels at 6300 r.p.m., producing a cutting edge
speed in excess of two miles a minute.

It is said by the manufacturer that through the use of the
helical cut gear drive in this tool 98% of the motor power is
transmitted to the driveshaft in comparison with the usual 76%
delivered in worm gear driven high speed saws.

This model is designated as Type K-75. It is perfectly
balanced and equipped with a 3/4 h.p. Universal motor. The
base raises and lowers for depth adjustment, and tilts to 45
degrees for bevels. A cast in and enameled graduated scale
affords quick and accurate setting. The frame is die cast
aluminum, polished to a mirror finish.
